

PATENT

ABSTRACT OF THE DISCLOSURE

1
2 A computer system for accounting for transactions at casino
3 gaming tables relies upon data entry of the transaction at the
4 gaming table by means of either a gaming terminal or a gaming
5 computer. One embodiment of the invention connects each of the
6 gaming terminals to a central computer. Another embodiment of the
7 invention networks each of the gaming computers to a central server
8 and/or router. In another embodiment, each gaming computer may act
9 as a stand alone, non-networked device.
